REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The closest prior art O'Neil teaches a twine that comprises a solid core and therefore cannot anticipate or suggest a "tubular fabric", which as shown in the appeal brief filed June 12, 2006 requires a hollow core. A twine as taught in O'Neil requires a solid core that is twisted and therefore cannot form a tubular fabric because the inner filaments forming the core cannot be pulled out to form a hollow core.

The closest prior art relating to a tubular fabric is Plymale, which fails to teach or suggest the claimed invention, because the filaments forming the longitudinal filaments and the helically wrapped filaments are formed of the same material and therefore cannot have two different elongation characteristics as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

2. The drawings received on August 5, 2003 are acceptable.

DETAILED ACTION

WITHDRAWN REJECTIONS

1. The claim objections of claims 8 and 10 of record in the Office Action mailed December 28, 2005, Page 3 Paragraph 5, have been withdrawn due to Applicant's amendments in the Paper filed March 9, 2006.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 8-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 8, the limitation "said first elongation capabilities" lacks antecedent basis, because the limitation that the longitudinally extending filaments have "first elongation capabilities" in line 3 of claim 8 has been deleted.

Regarding claims 8-11 and 15, the limitation "said longitudinally extending drawn and heat set thermoplastic

"filaments" lacks antecedent basis, because the limitation that the longitudinally extending filaments are "drawn and heat set" in line 3 of claim 8 has been deleted.

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. The 35 U.S.C. 102 rejections of claims 8-12 and 14 as anticipated by O'Neil are repeated for the reasons set forth in the previous Office Action mailed December 28, 2005, Pages 3-6 Paragraph 7.

Claim Rejections - 35 USC § 103

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

7. The 35 U.S.C. 103 rejections of claims 13 and 15 over O'Neil are repeated for the reasons set forth in the previous Office Action mailed December 28, 2005, Pages 7-8 Paragraph 10.

ANSWERS TO APPLICANT'S ARGUMENTS

8. Applicant's arguments regarding the claim objections of record have been considered but they are moot since the objections have been withdrawn.

9. Applicant's arguments regarding the 35 U.S.C. 102 rejections of claims 8-12 and 14 as anticipated by O'Neil and the 35 U.S.C. 103 rejections of claims 13 and 15 over O'Neil have been fully considered but they are not persuasive.

In response to Applicant's argument that O'Neil is drawn to a thermoplastic twine and not a tubular fabric, the strands of O'Neil along the outer perimeter form a hollow cylindrical body and the strands inside of the outer perimeter fills the hollow cylindrical body formed by the outer perimeter strands. A tubular object is still considered tubular even when filled. Therefore, the thermoplastic twine of O'Neil reads on the claimed limitation of "tubular fabric".

In response to Applicant's argument that O'Neil fails to teach drawing and heat setting the longitudinal filaments, the limitations that the longitudinal filaments are drawn and heat set have been deleted from the claims.

In response to Applicant's argument that O'Neil fails to teach that longitudinal filaments have less elongation

characteristics than the elastic filaments, O'Neil specifically teaches that the longitudinal filaments are formed of thermoplastics and teaches that the preferred elastic filaments are formed of ethylene-propylene rubbers (col.3, l.47-68), and rubbers are known to have greater elongation than thermoplastics.

Conclusion

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
